

Data Sheet | Parallels Remote Application Server

Application and Desktop Delivery

Parallels supports Channel Partners by providing organizations with secure access to applications & data on-the-go. By adding Parallels Remote Application Server to their portfolio, Channel Partners can provide a quick, easy, and reliable user experience regardless of location or device. With its affordable license model and straight-forward management console, Parallels RAS is the ideal solution for any reseller that wants to be successful in the application and desktop delivery sector.

10 Key Benefits of Parallels Remote Application Server

1. Enables mobility, with secure access to apps & data on-the-go.
2. Ready for hyper converged.
3. Delivers corporate-grade desktop applications to tablets, as well as other devices.
4. Delivers virtual resources from RDS and VDI.
5. Ensures high performance and consistent up-time with built-in server load balancing.
6. Guarantees data confidentiality with two factor authentication and advanced filtering.
7. Simplifies and optimizes healthcare IT with centralized RDS and VDI management.
8. Reduces costs and complexities of managing access to remote desktops and apps.
9. Mixes and matches virtual applications from Windows server 2003, 2008, and 2012.
10. Improves total cost of ownership and flexibility.

Parallels RAS delivers resources from hypervisors and Windows Remote Desktop Server end users, wherever they may be, and on whichever OS, computer, or mobile device they might be using.

Easy to configure and install, Parallels RAS can be set up in less than fifteen minutes, simplifying infrastructure and reducing costs. It increases productivity by empowering staff and managers to be able to work from anywhere. By leveraging the capabilities of Parallels Remote Application Server, public sector institutions gain the business agility required to drive better customer care, without investing in complex IT knowledge and consultation.

Application Publishing

Deliver applications to remote users and mobile devices in a seamless and easy-to-manage way. Users can continue to use files as though working on an office workstation. Parallels RAS is easy to configure; with a drag & drop functionality, making publishing an application easy.

Value for Customers

Parallels Remote Application Server provides a brilliant end user experience across devices and platforms. From the user's perspective, your software looks, feels, and performs exactly as if it was installed locally.

Flexibility

Parallels Remote Application Server is a solution based on proven technology that supports application delivery from Microsoft RDS, Citrix XenServer®, Microsoft Hyper-V®, and VMware ESXi™.

Thin Client

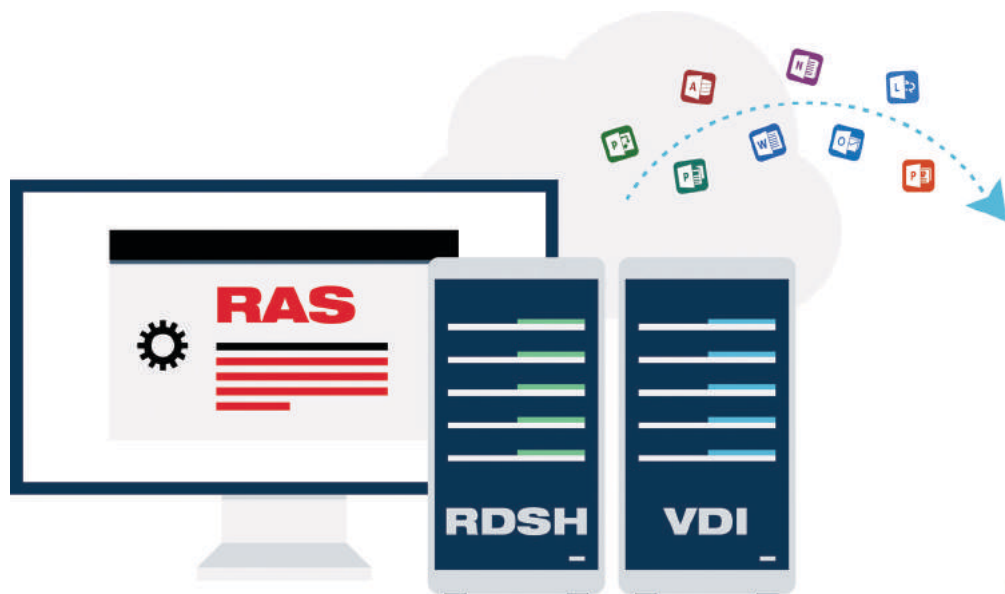

Together with the use of thin clients, Parallels RAS can lead to significant savings by deferring the need for additional hardware purchases. It supports high-speed delivery protocol, deploying applications and virtual desktops quickly and efficiently for end users.

High Availability–Load Balancing

Load balancing delivers high performance across an organization, allowing gateways and servers to work at high availability. Parallels RAS easily configures the infrastructure to the load by optimizing resources.

Instant enablement

With Parallels Remote Application Server, customer applications are immediately ready to run on a wide spectrum of mobile devices, offering a native app-like experience.
