Cloud app discovery	Anti-phishing	Zero-day malware protection	Data classification	Audit trail
Cloud usage visibility	Anti-spoofing	Account takeover protection	Data-centric access control	Compliance templates
App risk assessment	Attachment sandboxing			Policy enforcement
Event monitoring	Advanced URL protection			

EMAIL IS THE **#1 THREAT VECTOR** WITH OVER **90%** OF CYBER ATTACKS STARTING WITH A PHISHING EMAIL **–VERIZON DBIR 2018**

As email becomes the most popular SaaS app used, delivering anti-phishing and email protection is key for SaaS security.

NEXT-GEN EMAIL SECURITY FOR OFFICE 365 AND G SUITE

SonicWall Cloud App Security

CLOUD EMAIL

DEFAULT SECURITY

INBOX

300+ Threat Indicators per Email

- Machine learning analysis
- Language and content analysis
- Capture ATP sandboxing
- Advanced URL protection

- Full integration with Office 365 or G Suite
- Total mailbox control – inbound, outbound, internal

SonicWall Cloud App Security delivers virtual in-line protection to stop malicious emails, missed by the cloud service provider's default security, from reaching your inbox.
Download the Ebook: **Phishing In the Age of SAAS**

THROUGH 2022, AT LEAST **95% OF CLOUD SECURITY FAILURES** WILL BE THE CUSTOMER'S FAULT **–GARTNER**

Cloud security is a shared responsibility and customers are in charge of data security and access control for files residing in SaaS applications. The cloud service provider will not be accountable for unauthorized access and malware propagation.
